

Julien Law

julienlaw1@gmail.com - <https://www.linkedin.com/in/julienlaw>

Skills

Languages: Java, Javascript, Typescript, Python, Go

Tools/Frameworks: Spring Boot, React, Angular, Node JS, Flask, FastAPI, MySQL, MongoDB, Redis, Elastic Search

Cloud Services: AWS (Lambda, EKS, Cloudwatch, S3, SQS, SNS, DynamoDB, Cognito)

DevOps: Docker, Kubernetes, Jenkins, Github Actions, Ansible, Terraform

Experience

Pagefreezer Software

Senior Software Engineer

January 2023 - October 2024

- Developed a compare feature for archived web pages using Typescript and Angular, enabling users to track changes, monitor page updates, and observe page evolution
- Developed a frontend feature using Typescript and Angular that generated PDFs with layout and state preservation, reducing the need for server side processing
- Coordinated closely with UX designers and product team members to translate designs into functional Angular components, standardizing frontend vision and development process
- Partnered with an engineer to build a secure SSO system leveraging SAML authentication with AWS services (Cognito, DynamoDB, and Lambda) in Java 17 and Python
- Implemented a high-volume data export service in Java 17, enabling flexible archive retrieval in various formats while maintaining data accuracy
- Designed and implemented a solution using Python to recover lost data, transforming raw backups into a usable database format based on in-depth knowledge of the data structure

Team Lead

September 2019 - December 2022

- Streamlined development workflows by implementing Docker containerization, Ansible automation, and shell scripts
- Prioritized accessibility in frontend development, enabling seamless government engagements and a more inclusive user experience
- Implemented a modular scheduling system with message queues and a custom scheduling algorithm, ensuring efficient task distribution and preventing redundant data collection
- Implemented an automated data deletion service, increasing process efficiency and ensuring greater transparency for clients

Software Engineer

June 2014 - September 2019

- Integrated YouTube video capture into the web archive for complete multimedia preservation
- Reduced frontend load times by implementing a caching layer for large dataset processing
- Updated existing rest endpoints to use pagination to reduce payload size

Projects

Vanhacks Hackathon

- Co-designed and built an SOS application with a 3-person team during a weekend event
- Developed the frontend UI using React and integrated it with a Flask-based Python backend

Education

University of British Columbia - Bachelor of Applied Science (Computer Engineering)
