

Julien Law

julienlaw1@gmail.com - <https://www.linkedin.com/in/julienlaw> - Vancouver, Canada

Skills

Languages: Java, Javascript, Python, Typescript, Go

Tools: Spring Boot, React, Angular, Node JS, Flask, FastAPI, MySQL, MongoDB, Redis, Elastic Search

Cloud Services: AWS (Lambda, EKS, Cloudwatch, S3, SQS, SNS, DynamoDB, Cognito)

DevOps: Docker, Kubernetes, Jenkins, Github Actions, Ansible, Terraform

Experience

Pagefreezer Software

Software Engineer

June 2016 - Present

- Implemented a data export service using Java and Spring Boot to allow users to download entire website archives in WARC or original data formats
- Collaborated with another software engineer to implement SAML authentication as part of a SSO solution through AWS Cognito, DynamoDB and Lambdas
- Implemented feature a time limited public browsing feature to allow client archives to be audited by external organizations of a selected date range
- Implement service to ingest logs into ELK to allow developers to read in Kibana
- Integrated metabase for internal teams to create analytics dashboards
- Developed a suite of tools to automate common tasks performed by support teams
- Collaborated with infrastructure teams to implement automated process to add additional servers for distributed web crawlers

Team Lead

September 2019 - December 2022

- Enabled faster feedback loops in the development process by redesigning the entire build process through a combination of Docker containers, Ansible, and shell scripts
- Advocated for redeveloping frontend to follow WCAG 2.1 accessibility guidelines for inclusiveness and complying with potential government clients
- Coordinated and implemented a solution to modularize web crawler scheduling component into a separate service to better facilitate job assignments to distributed web crawlers
- Implemented automated data deletion service and add transparency to data deletion process

Junior Software Engineer

June 2014 - June 2016

- Developed feature to download embedded Youtube videos for web archiving service
- Implemented simple caching layer to reduce frontend rendering time for large datasets
- Updated existing rest endpoints to use pagination to reduce payload size

Projects

Vanhacks Hackathon

- Co-designed and built an SOS application with a 3-person team during a weekend event
- Developed the frontend UI using React and integrated it with a Flask-based Python backend

Education

University of British Columbia - Bachelor of Applied Science (Computer Engineering)
